

BHASKAR JHA

BACK-END DEVELOPER

✉ bhaskar.nit.mca@gmail.com ☎ (+91) 8700391758 📍 Bangalore, India 🌐 linkedin.com/in/bhjha

SUMMARY

Software Engineer with 4.5+ years of experience in backend development, cloud-native applications. Proficient in Java, Spring Boot, Microservices, Kubernetes, Docker, AWS, and gRPC, with expertise in workflow orchestration using Argo Workflows and GitOps deployment models. Skilled at building scalable APIs, optimizing CI/CD pipelines, and improving code quality and test coverage.

SKILLS

- | | | |
|-----------------|---------------------|------------------|
| • Java | • Kubernetes | • AWS Glue |
| • PostgreSQL | • Spring Boot | • gRPC |
| • System Design | • GitOps Deployment | • Multithreading |
| • Docker | • Argo Workflows | |

EXPERIENCE

Software Engineer 2 Jan 2025 – Present
FICO Bangalore, India

- Developed and automated pipeline orchestration by designing gRPC-based APIs with Spring Boot and Argo Workflows, enabling seamless job execution, control, and log retrieval across distributed systems.
- Engaged in the integration of observability and monitoring capabilities by configuring Splunk dashboards to capture and analyze metrics, traces, and logs for Argo Workflows and the Pipeline Service, ensuring comprehensive visibility, troubleshooting, and operational reliability.
- Automated deployments for the Pipeline Service using Helm, GitHub Actions, and environment specific Git workflows, incorporating pre-merge validations and Teams notifications, while enabling post-merge auto-deployments to lower environments for faster, consistent, and error-free releases
- Implemented multi-tenancy Strategy in the Pipeline Service using RBAC to ensure isolation, so one namespace cannot view or execute workflows of another, enabling secure, tenant-specific operations.

Software Engineer 1 Jan 2023 – Dec 2024
FICO Bangalore, India

- Optimized infrastructure and security by migrating from Ingress to HTTPRoute for improved routing flexibility and maintainability, configuring AWS permissions for secure CloudWatch Glue log access, implementing an OPA sidecar for fine-grained authorization and authentication.
- Developed a Spring Boot gRPC client from scratch to communicate with the ETL service, calling its APIs to trigger ETL jobs and retrieve job status, ensuring seamless execution and monitoring.
- Built and containerized the application by creating a production-ready Docker image, enabling deployment, portability, and scalability across environments.

Software Engineer Associate Jul 2021 – Dec 2022
FICO Bangalore, India

- Engineered scalable ETL services by developing gRPC APIs for AWS Glue (job execution, Glue log retrieval, Iceberg/Pinot table management), supporting interval-based ETL jobs, and integrating Splunk for enhanced observability.
- Engineered asynchronous processing using @Async to update Glue job statuses in PostgreSQL DB, ensuring seamless synchronization between AWS Glue job states and the database for accurate and consistent status tracking.

Software Engineer Intern Jan 2021 – Jun 2021
FICO Bangalore, India

- Improved code reliability by introducing mutation testing with 30% defect reduction within 9 months.
- Strengthened security and maintainability by resolving vulnerabilities through SonarQube and KICS security scan fixes, and integrating SonarQube into GitHub Actions for automated quality checks and continuous code analysis.

EDUCATION

Masters of Computer Application July 2018 – May 2021
NIT Raipur

Bachelor of computer Application July 2014 – May 2017
Agarwal College Ballabgarh, India

HOBBIES

Algorithms
System design
Backend development
